AGENDA

1. Introduction
2. Analysis
3. Recommendations
4. Q&A

Introduction

Project Objective:

To deliver a data-driven strategy for the CVM team to accelerate subscription growth by analyzing user demographics and viewing behaviors.

Analytical Scope:

- Data Foundation: Integration of 10,000 viewership transactions with 5,375 user profiles via Databricks.
- Data Integrity: Execution of a rigorous cleaning process (de-duplication and NULL handling) to ensure high-accuracy insights.
- Temporal Accuracy: Conversion of raw UTC timestamps to South African Standard Time (SAST) for localized behavioral mapping.
-

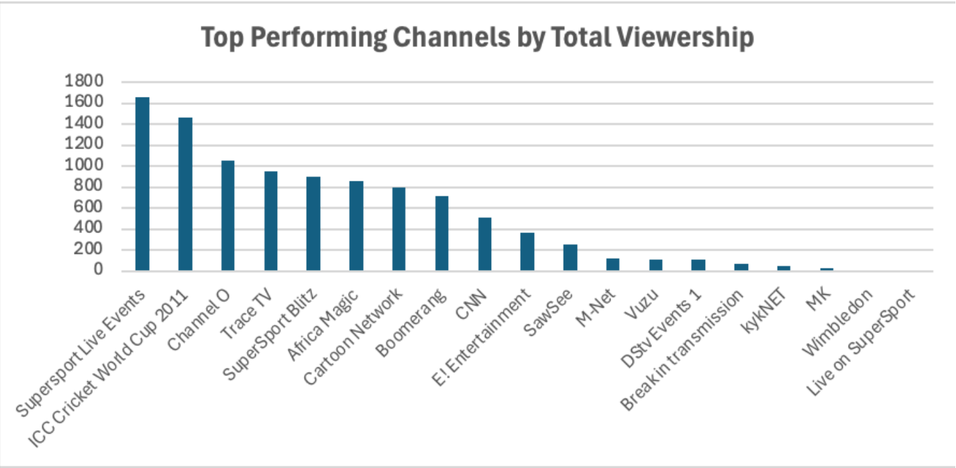
Key Themes:

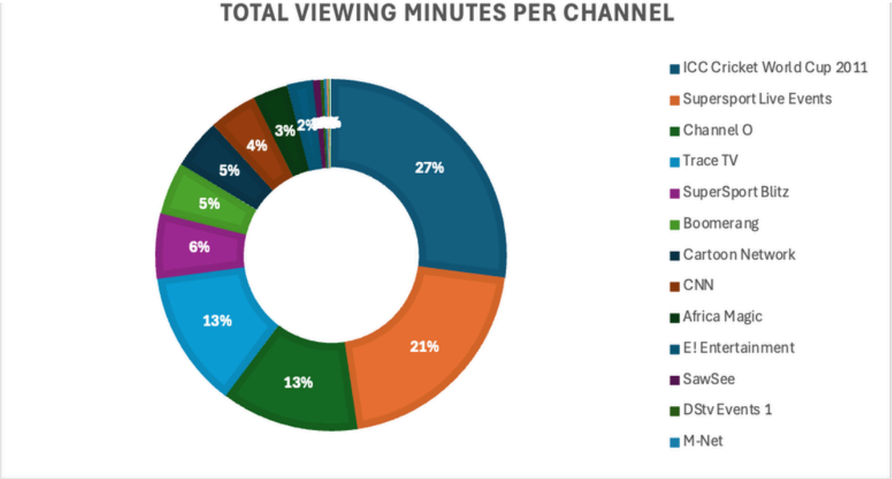
- Demographic Drivers: Identifying the core segments (Age, Province, Race) fueling current engagement.
- Consumption Patterns: Analyzing peak vs. off-peak viewing windows and day-of-week trends.
- Growth Opportunities: Strategic recommendations to bridge consumption gaps and scale the subscriber base.

BrightTV|Channel Performance

insights:

- Live sports **(Cricket World Cup and SuperSport)** dominate engagement, accounting for **48% of total viewing minutes**, proving to be the platform's **primary retention driver**.
- **Channel O** and **Trace TV** drive the highest volume of individual views, serving as "snackable" content that ensures daily user return.

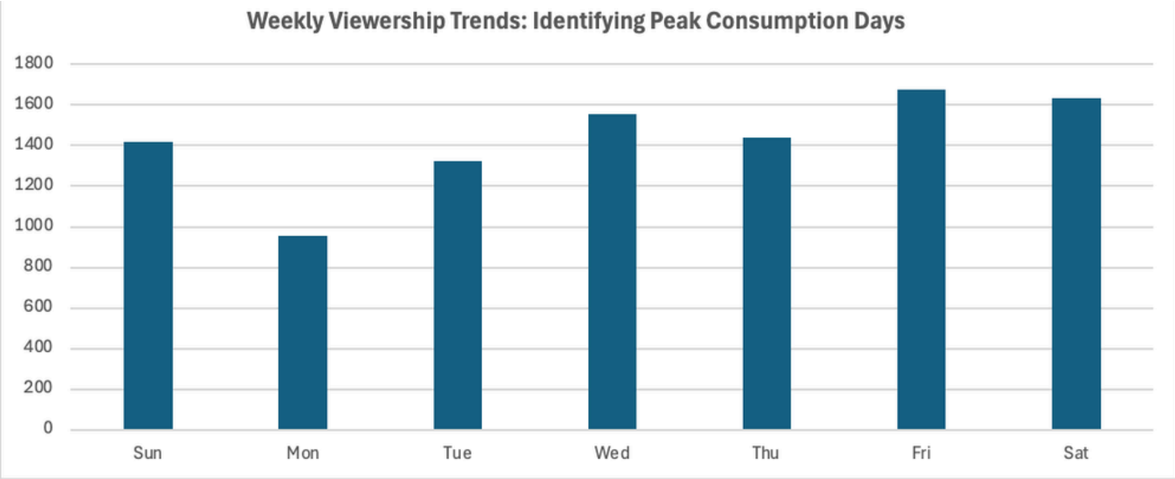


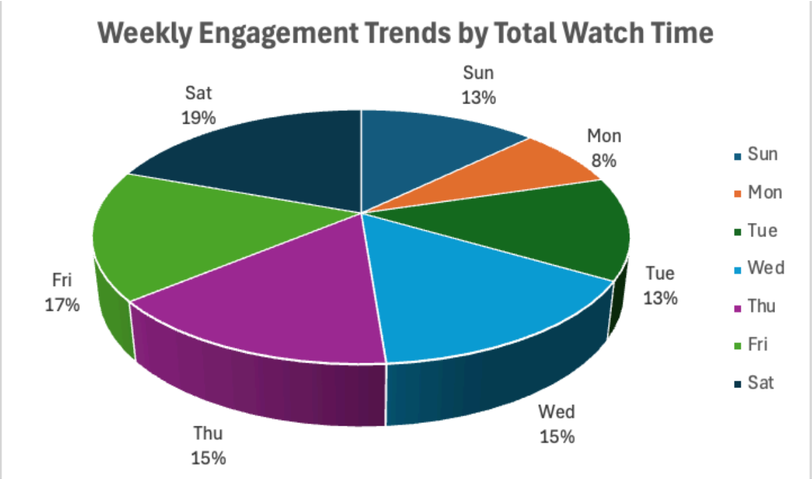


BrightTV|Weekly Viewership Trends

Insights:

- **Saturday** is the platform's strongest day, contributing 1**9% of total watch time** (17,761 minutes).
- **Monday** is the **weakest day across all metrics**, with viewership dropping below **1,000 views** and watch time falling to just **8%** of the weekly total.

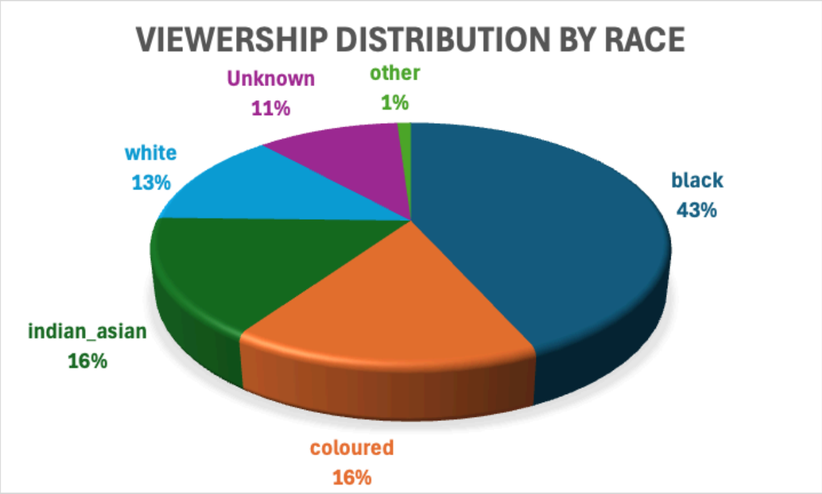


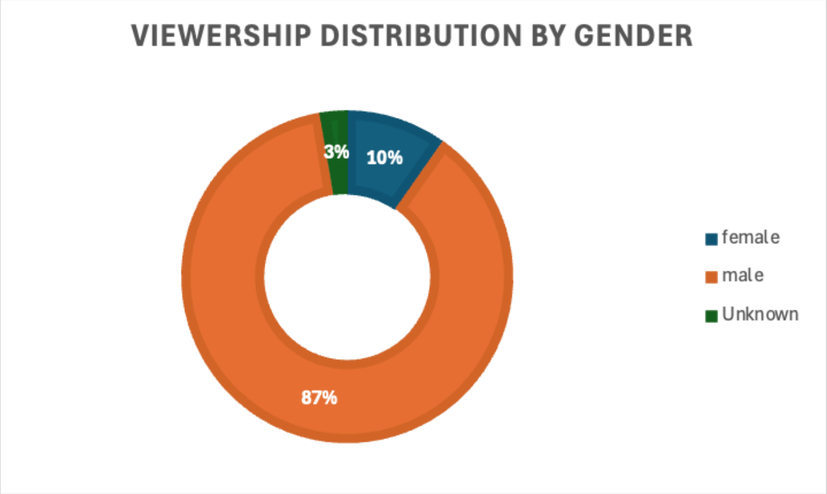


BrightTV|Viewership by Race&Gender

Insights

- Viewership is overwhelmingly skewed toward **males (87%)**. This aligns with the content data showing a heavy preference for live sports.
- The **Black (43%), Coloured (16%),** and **Indian/Asian (16%)** segments represent the majority of the base, totaling **75%** of viewership.

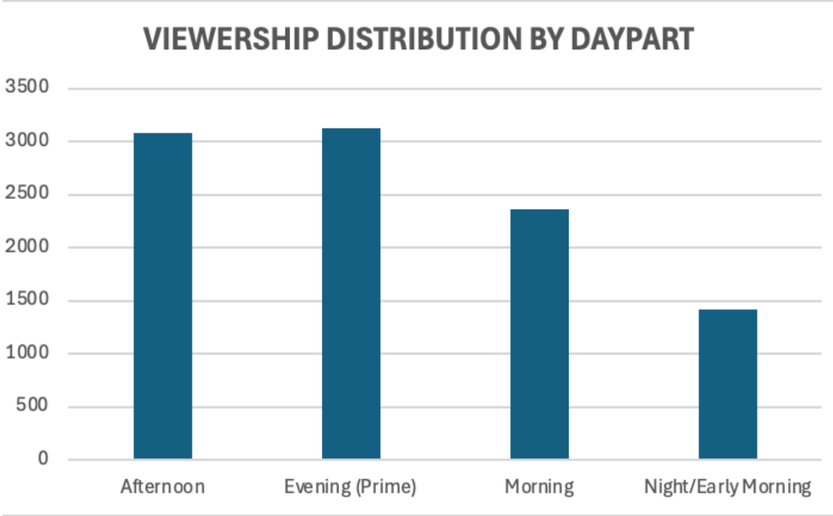


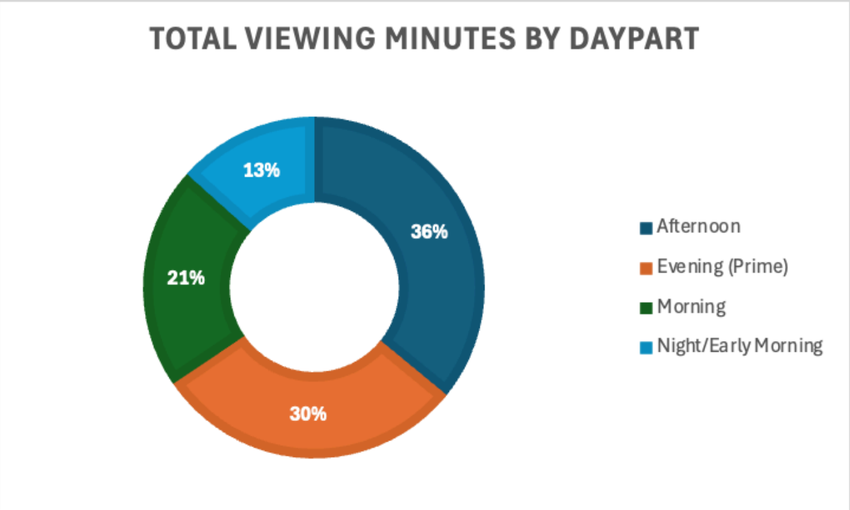


BrightTV|Viewership by Day Part

Insights

- The 12:00–16:00 (Afternoon) and 17:00–21:00 (Prime) windows combined drive 66% of total engagement
- While Evening (Prime) generates the highest volume of individual views, the Afternoon period dominates in total duration, accounting for **36%** of all viewing minutes.
- **Afternoon viewers** demonstrate significantly **higher "stickiness,"** staying on the platform for longer, more sustained sessions compared to the higher-traffic but shorter-duration evening window.
- **The Night/Early Morning** slot is the platform's weakest link, contributing only 1**3% of total watch time**, indicating a lack of "overnight" or 24-hour habitual consumption.

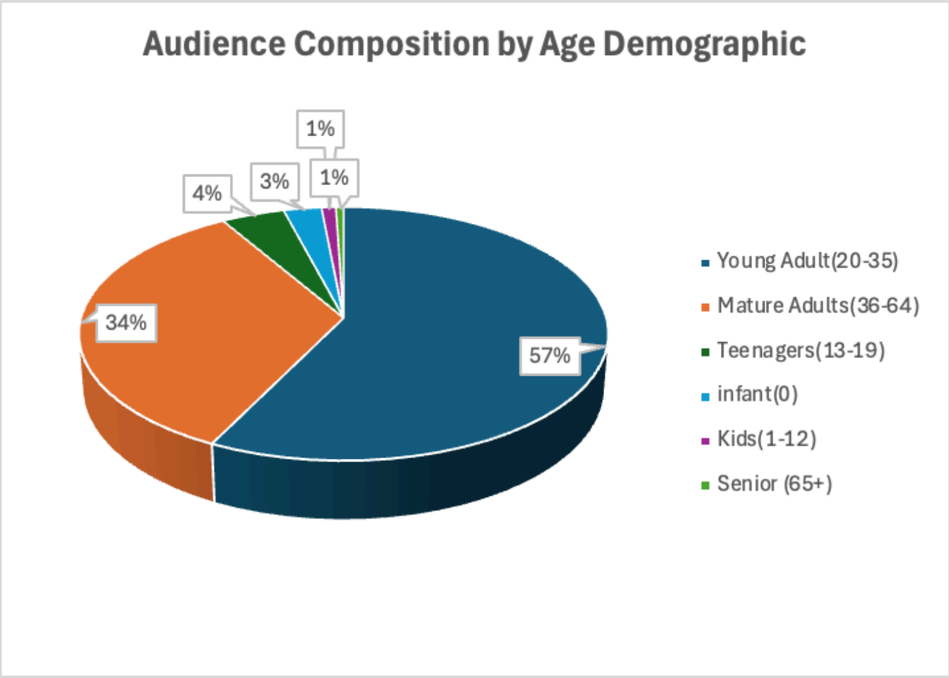




BrightTV|Viewership by Age Category

Insights:

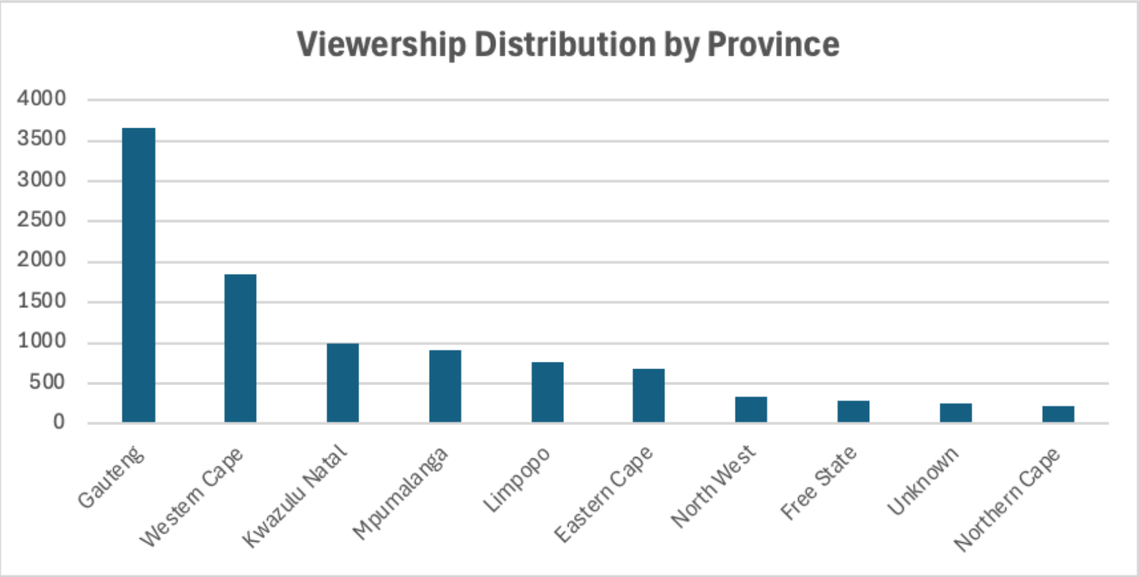
- **Young Adult Core:** The **20-35 age group** is the definitive powerhouse demographic, owning **57%** of the total viewership share.
- **Active Adult Reach:** Combined with **"Mature Adults (36-64)**," these two segments represent **91%** of the entire audience.
- **Low Penetration Segments:** T**eenagers, Infants, and Seniors** collectively make up less than **10%** of the base, suggesting the platform content is currently skewed toward a working-age, adult audience.



BrightTV|Viewership By Province

Insights:

- **Gauteng i**s the primary driver of engagement, contributing **36.5%** of total views and doubling the volume of any other province.
- The "Big Three" **(Gauteng, Western Cape, and KZN)** represent **65%** of the total viewership base, indicating where the current core revenue sits.
- **Mpumalanga (918) and Limpopo (763)** show strong organic engagement, serving as high-potential regions for localized marketing spend.
- **Growth Opportunities:** Low penetration in the F**ree State** and **Northern Cape** suggest untapped regions where the CVM team can pilot new acquisition strategies.



BrightTV|Strategic Recommendations

1. **Bridge the "Monday Slump"**

- Strategic Hook: Launch "Monday Night Premieres" for high-impact content to counter the weekly engagement low (8% of watch time).
- Incentivized Viewing: Deploy CVM (Customer Value Management) push notifications offering "Double Points" or data rewards for subscribers who engage during the Monday trough.

2. Monetize the "Afternoon Peak"

- Premium Ad Placement: While Evening has more views, the Afternoon holds the highest total watch time (36%). Shift high-value advertisement inventory to this slot to capitalize on the higher "stickiness" of the daytime audience.
- Long-Form Content Strategy: Prioritize the release of movies or sports highlights in the 12:00–16:00 window, where user session lengths are naturally longer.

3. Close the Gender and Content Gap

- Acquisition Pivot: With an 87% male skew, BrightTV must acquire female-centric lifestyle, soap opera, and drama content to unlock the other half of the market.
- Cross-Promotion: Use the high-traffic music channels (Channel O/Trace TV) to cross-promote new diverse genres, leveraging the platform's young adult core.

4. Geographic and Demographic Expansion

- Regional Growth: Maintain the Gauteng core while launching localized marketing pilots in Mpumalanga and Limpopo, which show strong organic growth potential compared to other minor provinces.
- Broaden the Age Funnel: Develop a "Family Tier" or enhanced "Kids" offering to increase penetration in the Teen and Child segments, which currently account for less than 5% of total views.

5. Operational and Technical Optimization

- Retention Safeguards: Monitor the "Break in Transmission" KPI closely. Although currently low, reducing these technical friction points is critical for maintaining the high-duration viewing habits seen on weekends.
- Prime Time Scalability: Ensure server infrastructure is optimized for the Friday/Saturday evening surge to prevent churn during the platform's highest-traffic windows.

Q&A
